

FERNMOUNT RURAL FIRE BRIGADE

Fernmount, North Coast. NSW

Parchem Construction Supplies helped provide a safe resurfacing solution for our local services.

Project Details:

Fernmount Rural Fire Brigade needed to solve the problem of a slippery floor after fighting fires.

Location:

Fernmount, North Coast, NSW.

Developer/Contractor:

Alan Kable (Allcab)

What product was used and why?

Covertex was used because it was needed to go over existing concrete. The colour yellow (ctyel) was chosen as its very close to safety yellow.

Project Scope:

The floor in the fire station was very slippery when the fire fighters got out of their trucks. They also needed a line marker for the two truck bays. Covertex provided the perfect non-slip, durable solution with the benefit of being cheaper than non-slip paint or non-slip tape.

It has achieved its purpose as its not as slippery as before and it defines the parking bays and walkways. It looks good and the colour really stands out making the lines very definite.

Performance:

As stated previously the project looks good and the colour really stands out. If the floor is kept sealed it will maintain its appearance and remain easy to clean.

Testimonials/Quotes:

Everyone was happy with the result. I personally would have liked to have seen it sprayed on a little rougher (for less slip)
