

MASAN CITY HISTORICAL BRIDGE

Masan City, South Korea

Project Details:

The Masan city council decided to preserve the old bridge with historical value. The colours selected were to make contrast with the hundreds years old temple beside the bridge. The temple is still considered the fortress protecting the city from invasion.

Location:

Masan City, South Korea.

Developer/Contractor:

Chiju Constuction Co., Ltd.

Product:

Covertex was the obvious application to renovate the entire bridge - combined with European Fan and Antique Tile stencil pattern.

Project Scope:

Being a bridge, it was crucial to ensure that drainage was properly controlled and that expansion joints were clearly identified to avoid the number of cracks in the existing surface. Old coatings of concrete and asphalt were removed and a new concrete layer was poured.

Parchem Construction
Supplies provides the
means to help preserve
historical Korean bridge.

Performance:

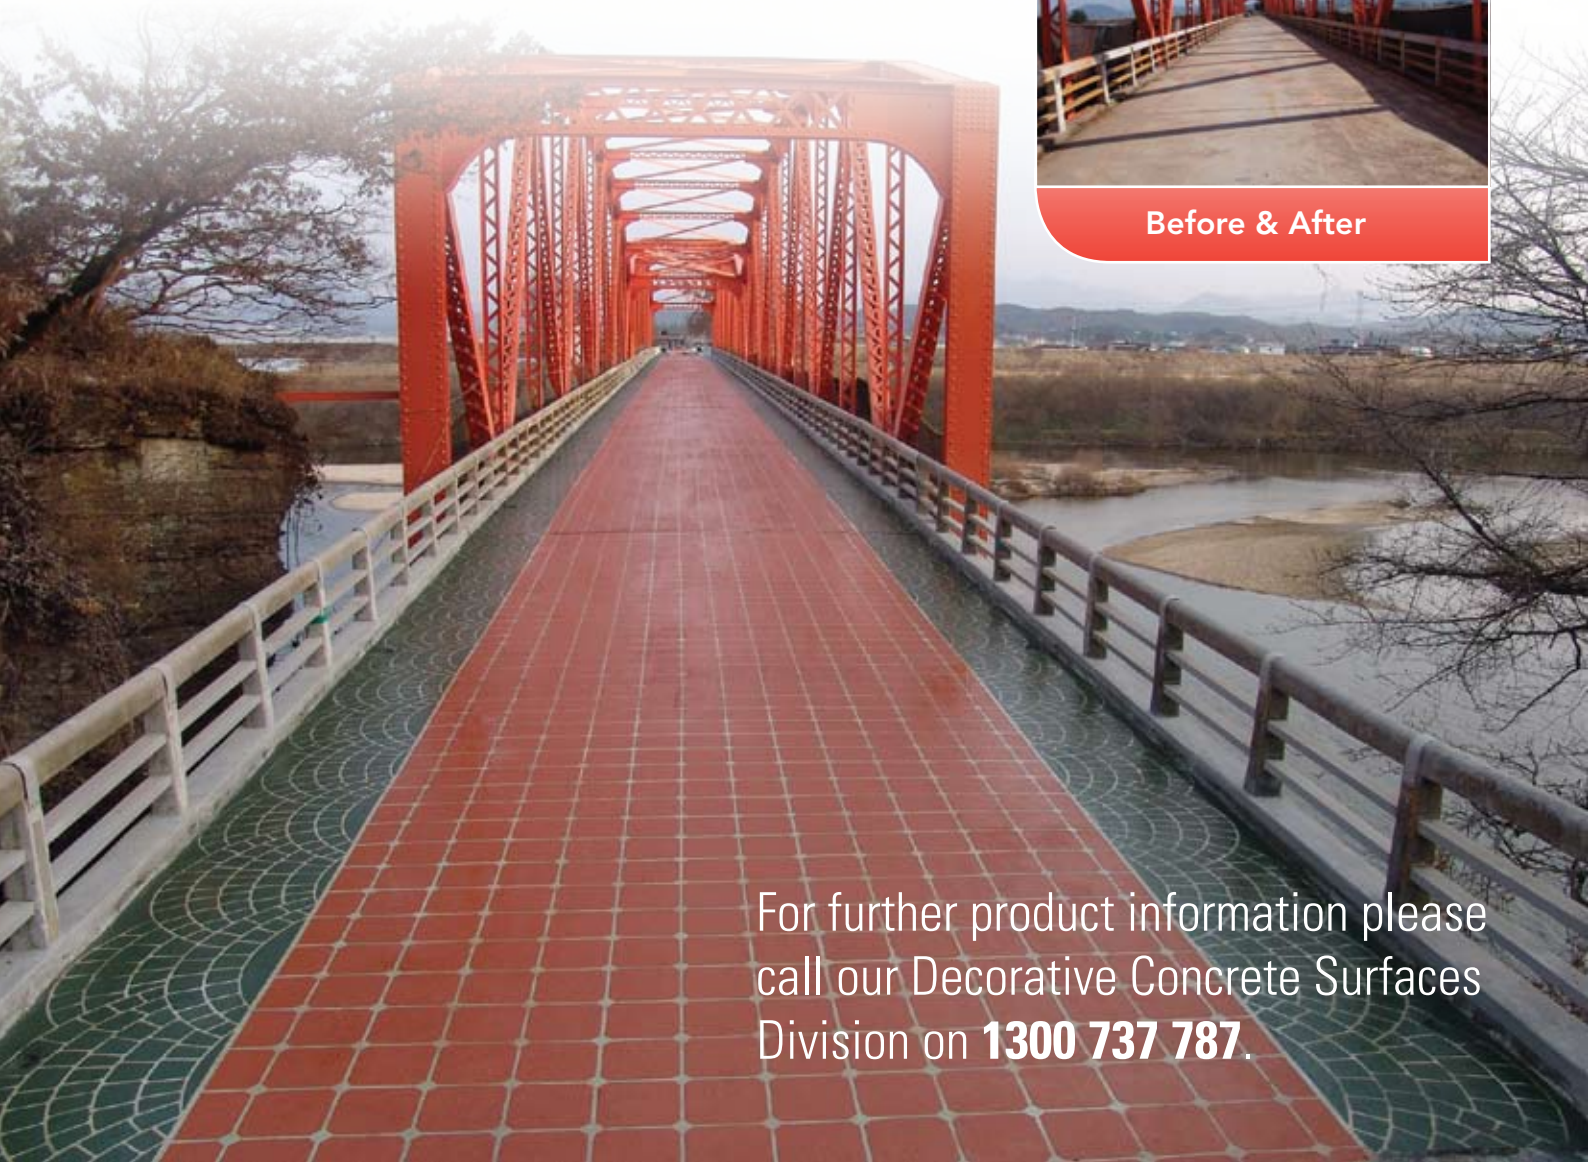

The use of colours and patterns used were a key factor in the decision making process. Other alternatives were discarded as both endurance and aesthetic were required to perform simultaneously. Being a municipal job, locally manufactured decorative concrete products were not considered in the first instance.

Testimonials/Quotes:

The company chose Parchem Construction Supplies as they would never have been able to achieve such bright colours and excellent results using local products.

Before & After
