

Protection caps for re-inforcement bars

Uses

- Exposed ends of re-inforcement
- Stand alone application
- Trench or similar application
- Horizontal bars
- Suitable for use with star pickets

Description

The Reo-Sok system helps protect workers from potential injuries on construction site resulting from exposed ends of steel reinforcement bars, including injuries to eyes from horizontal bars extruding from vertical surfaces.

The Reo-Sok System comprises brightly coloured extruded plastic caps to which reinforcement bars can be added for increased protection.

The various sizes of Reo-Sok cater for all common reinforcement steel diameters as well as covering ends of star pickets and some scaffolding profiles.

The Reo-Sok System is recognised and accepted by various Federal and State Safety Authorities in Australia and New Zealand.

Tests conducted by TEI Consulting Engineers, highly respected testing engineers in the United States, have proven that Reo-Sok drastically reduces the risk of impalement and other serious injuries in the workplace.

Advantages

- High visibility yellow
- Suits 12 to 24 mm reinforcing bars
- High visibility orange
- Suits 24 to 36 m diameter reinforcing bar
- Also suitable for star pickets

Application

Continuous Application

Ensure reinforcement bars are level. Place the correct size Reo-Sok protective cap on exposed bars. Clip-in 12 mm continuous bar. Bend return ends to 90° for safety. Any reinforcement bars that protrude above the rest should be cut back level.

Stand Alone Application

For reo-bars that stand alone or that need to be higher than others. Reo-Sok combined with protective T-Bar must be used. T-Bars are available on request or simply make your own on site. This will not provide the same protection as the continuous Reo-Sok System, however it will provide greater protection than no bar at all.

Trench or similar Application

Where a worker can fall into trenches, shafts, piers, etc, the Reo-Sok

System must be used with protection bar.

Horizontal Bars

Reo-bars that protrude horizontally can be made safer with Reo-Soks applied without the need for an additional bar.

Reo-Sok

Important notice

A Safety Data Sheet (SDS) and Technical Data Sheet (TDS) are available from the Parchem website or upon request from the nearest Parchem sales office. Read the SDS and TDS carefully prior to use as application or performance data may change from time to time. In emergency, contact any Poisons Information Centre (phone 13 11 26 within Australia) or a doctor for advice.

Product disclaimer

This Technical Data Sheet (TDS) summarises our best knowledge of the product, including how to use and apply the product based on the information available at the time. You should read this TDS carefully and consider the information in the context of how the product will be used, including in conjunction with any other product and the type of surfaces to, and the manner in which, the product will be applied. Our responsibility for products sold is subject to our standard terms and conditions of sale. Parchem does not accept any liability either directly or indirectly for any losses suffered in connection with the use or application of the product whether or not in accordance with any advice, specification, recommendation or information given by it.
